Sequences of spiral knot determinants. (English summary)

J. Integer Seq. **19** (2016), no. 1, Article 16.1.4, 14 pp.

In the present paper, by fixing the strand number and varying the repetition index and using a new periodic crossing matrix method, the authors obtain integer sequences of spiral knot determinants, which knots are a generalization of the well-known class of torus knots indexed by the strand number and base word repetition. *Murat Cancan*
